

ABSTRACT OF THE INVENTION

The present invention is to provide a cellular phone for a specific person who is not skilled in operating a typical cellular phone, which comprises a plurality of shortcut keys and a plurality of software packages installed in a control circuit, the software packages being linked to the shortcut keys so that a pressing of one of the shortcut keys causes a corresponding software package to run for commanding the cellular phone to make a call by dialing a selected one of a plurality of predetermined phone numbers. Thus, the manufacturing cost of the cellular phone will be significantly reduced due to without having complicated function keys or complicated software packages, and a user can easily use the cellular phone without worrying about how to operate it.
